TUESDAY, JULY 28, 1896.

PREVENTION LACKING.

Doubtless people of all shades of politics concede the wisdom of the Government in employing Professor Koehle, the expert entomologist, for the work of finding and applying antidotes to the insect blights and other plant pests that, at various times and in diverse ways, have gained admission to our Eden. Facts have been brought to the attention of the BULLETIN, however, to show that while the pound—or hundred-weight if you like to call it—of cure is being practised, the ounce of prevention is being sadly neglected. Our fields and gardens are liable to be devastated by enemies as yet unknown, which may baffle even tons of zinc. It is a member of the Legislature who gives us the information. Lately it was reported in the press that Professor Koehle had destroyed some growing plants from China, because he had discovered teeming colonies of a destructive parasite about their roots. In conversation with our informant, a visiting naturalist, whose present work is the collection of bugs, said that he was going hence to China. On being asked as to the attraction there, he replied that he had seen some earth around the roots of plants from China which was alive with strange bugs. In further conversation the naturalist suggested a possibility of dire calamity to our rising coffee industry, which might only be averted by the exercise of the utmost vigilance on the part of the authorities. There is in some coffee countries of the Orient a parasite that attacks the roots, thereby killing the coffee tree. From the "nature of the beast," it is a more insidious enemy than any blight infesting the leaves. Worse, it is fatal to the tree, instead of merely destroying the crop. Now, it is reported—but we do not vouch for the information—that coffee seeds or plants have been ordered from the very home of these deadly pests. Such a man as Professor Koehle has on hand all the time to submit all trees, plants and seeds imported to a microscopic examination, with his scientific knowledge, the danger of infection of our now extensive coffee fields might be considered as slight if not non-existent. But the professor's duties require him to be here, there and everywhere throughout the group and occasionally, as we have lately seen, to take prolonged trips abroad. What is needed is a scientific inspector in Honolulu, where alone plants and seeds should be admitted, all the time. Commissioner Marsden is recognized as a man versed in agriculture and horticulture; but, as he is not a trained entomologist, any strange pest may slide in without detection by him. Taking into consideration the large amount of capital now invested in coffee-growing, a large proportion of it being the "little all" of the investors, the matter is one of extreme seriousness. As represented to the BULLETIN it resolves itself into a menace to every coffee tree growing in these islands.

Elsewhere is the report of a friendly chat given by the Attorney General to a representative of this paper yesterday afternoon. Although not a formal interview it forms an interesting complement to Dr. Wood's statement, published in this paper the day the two gentlemen returned from the Orient, of the official results of their trip.

Judiciary Settings.

An order of default of defendant has been signed by Judge Carter in James L. Newton and George H. Newton vs. Frank C. Blair and others, action for quieting title in real property. Hartwell for plaintiffs.

Manuel Carvalho and others have ten days further from the 27th to perfect their exceptions to the Supreme Court, from their conviction of unlawful assembly and riot.

Quong Sam Kee Co. by their attorney, A. G. M. Robertson, answer by general denial the complaint of Kahuka Plantation Co. for debt.

The Royal Insurance Co. by its attorneys, Cecil Brown and A. G. M. Robertson, answers by general denial the complaint of H. W. Schmidt & Sons, assumpsit, and gives notice of intention to rely upon fraud as a defense.

PLACE OF RESIDENCE.

tilation. This is attained by planting trees, which with more or less powerful roots combine scarce, thin, half-transparent foliage. Such are eucalyptus, casuarina (iron tree), grevillea, algaroba, etc.; bush, underbrush and small plants are injurious, shading the soil too much, and requiring too much irrigation.

Ralph Turner has been laid aside two weeks by a severe cut on the hand, got from a buzz saw, a narrow escape from maiming.

LEWERS & COOKE

A GREAT INVENTION

The Traveling Lawn Sprinkler

Moves itself about your lawn. Travels in a straight line or a circle. Stops automatically. Set for any length of hose.

REFRIGERATING MACHINES AND CREAM SEPARATORS.

Now that the Fourth of July celebration is over and people are settling down to business again, we desire to call the attention of the residents of the Hawaiian Islands to a few matters of interest.

We have lately been appointed sole agents for BARBER'S REFRIGERATING MACHINES.

This machine can readily be arranged in creameries, etc., so as to cool cream, milk and water to any desired temperature down to and below freezing, as also to hold a well-insulated butter-room at any temperature desired above 30 degrees, only requiring the running of the machine from four to six hours per day, which is the usual time that the other machinery in a creamery is operated.

In addition to creameries, these machines are also adapted for use in produce houses, meat markets, hotels, club houses, etc. Their perfect work has been demonstrated fully in the past two years in a large number of creameries in different portions of the East, and more particularly in the Elgin, Ill., district, as well as in butter houses in Chicago, New Orleans, and elsewhere.

The cost of operation is nominal, as the charge of ammonia furnished with the plant should last a year or more without recharging, and will cost only about \$15.00.

The DE LAVAL CREAM SEPARATORS are now in almost universal creamery or factory use the world over, and in the past few years the Dairy or "Baby" sizes of these machines have almost as completely revolutionized general dairying as had the larger machines previously the creamery industry.

The De Laval Company now presents to the public a smaller type of its latest and most improved "Alpha" machines intended for household and small dairy use, and designed to confer in its new field the same inestimable benefits of centrifugal separation of cream from milk as have the larger machines in their respective spheres.

No more fitting and descriptive term could well be applied to this little machine than the name which has been so aptly given it,—the "Humming-Bird." It is very small, very compact, extremely simple, easily understood and cared for, safe and durable. It possesses every advantage to be found in any of the larger "Alpha" machines, is so extremely easy of operation by reason of its new method of obtaining motion as to be designed mainly for use by women and children, and is absolutely thorough in its effectiveness. It need simply be said that it fulfills every requirement of its purpose.

THE

Hawaiian Hardware Co. LIMITED,

Opposite Spreckels' Bank,
NO. 307 FORT STREET.

The BULLETIN very kindly noticed our new department that of

Copper Plate Engraving

in its columns of last week, and already the number of orders for this kind of work, convinces us that there has been pressing need for such work in this city.

Without making the slightest brag on the kind of work our engraver is able to do, we feel so certain that we can please the over particular that there will be no longer any excuse for sending away for your cards, or for any of the finer embossing work, which you have been compelled to do up to the present moment.

Our Prices

Will be found to be

FRISCO PRICES

Our stationery, the latest and finest in use. We will keep posted on every new wrinkle in the work and you can rest assured that any work turned out by us will be correct and the kind you won't be ashamed of.

Will you keep this work at home by placing your orders with us? You save the expense of mailing, to say nothing of the long wait, so let us do your work.

B. F. Ehlers & Co., Fort Street

W. W. DIMOND'S

This is hot weather, food spoiling weather, unless the proper attention is given to refrigerator suggestions. There's all sorts of devices for keeping food fresh, good, bad or indifferent. Some of the named refrigerators are no better than dry goods boxes; the lining is not right and the system of draught and air circulation is defective.

In the United States there were complaints against the Gurney, complaints we had not heard of here. When we were at the Coast a few weeks ago, we took the trouble to investigate and learned that the objections were all right, but they were against the Gurney Challenge refrigerator and not the Gurney Cleanable.

We sell the Cleanable; were appointed sole agents for the Hawaiian Islands and we don't sell any other. The Gurney Cleanable is lined with mineral wool, the greatest non-conductor known to science; the Gurney Challenge is lined with charcoal and is a cheap combination that is unserviceable.

Foods are easily kept sweet and appetizing with a right refrigerator to help. Your summer health is easier kept than regained. There are many refrigerators, some excellent ones, but none equal the Gurney Cleanable. Profits are forgotten when we sell them.
